

# Method of Attaching and Detaching Mouthpipe

The mouthpipe of your instrument is detachable.

## The detachable section fits together by a screwing action.

- ① The tip of the mouthpipe is thin. Be careful not to damage it while attaching and detaching.
- ② If you apply a small amount of slide grease to the tip of the mouthpipe, attaching and detaching can be performed more smoothly.
- ③ When attaching, clockwise (rotate to the right).
- ④ When the mouthpiece is inserted, it is easy to hold and attach or detach the mouthpipe.
- ⑤ When detaching, counter-clockwise (rotate to the left).

- ③ **When attaching:** slide up to the threaded section and then rotate to the right.

- ⑤ **When detaching:** detach from the threaded section by rotating to the left and pull out.

- Please use your instrument with the mouthpipe completely attached.
